Preface	1
Section 1:	
■ Executive Summary	5
Overview	5
1 The Science Case.....	10
1.1 Research with Rare-Isotope Beams – Nuclei Far From Stability	10
1.2 Research with Antiprotons – Hadron Spectroscopy and Hadronic Matter	21
1.3 Nucleus-Nucleus Collisions at High Energy – Compressed Nuclear Matter	26
1.4 Ion Beam and Laser Beam Induced Plasmas – High Energy Density in Bulk Matter.....	33
1.5 From Fundamentals to Applications – Quantum Electrodynamics, Strong Fields, and Ion-Matter Interactions.....	38
2 The Facility	43
3 Civil Construction.....	51
4 Environmental and Safety Aspects for Design and Operation of the New Facility.....	52
5 Costs, Schedule and Organization	54
6 The International Context.....	56
7 Concluding Remarks and Outlook	59

Section 2:

Science Case 63

■ 1	Research with Rare Isotope Beams – Nuclei Far From Stability	63
	Overview.....	63
1.1	Scientific Case.....	69
1.1.1	Introduction	69
1.1.2	Exotic nuclei	77
1.1.2.1	Nucleonic matter	77
1.1.2.2	Fundamental Interactions	90
1.1.2.3	Nuclear Astrophysics.....	94
1.1.3	Experimental approach	103
1.1.3.1	Production and separation of exotic nuclear beams	103
1.1.3.2	Experiments with stored beams.....	109
1.1.3.3	Reactions with high-energy beams	124
1.1.3.4	Low-Energy and Stopped Beams	132
1.1.3.5	High-Resolution g-Ray Spectroscopy	137
1.2	Instrumentation and Detectors	143
1.2.1	The Fragment Separator	143
1.2.1.1	Operating Domain	145
1.2.1.2	Design Goals and Performance	146
1.2.1.3	Production Targets	151
1.2.1.4	Secondary-Beam Intensities	155
1.2.2	Experiments in the Storage-Cooler Rings	157
1.2.2.1	The Collector Ring (CR)	159
1.2.2.2	The New Experimental Storage Ring (NESR).....	159
1.2.2.3	The Electron – Heavy Ion Collider.....	162
1.2.3	Reactions with High-Energy Exotic Nuclei	168
1.2.4	Experiments with Low-Energy Exotic Nuclei	171
1.2.5	High Resolution Gamma-Ray Spectroscopy	174
	Acknowledgment.....	178
	References	180

■ 2	Research with Antiprotons – Hadron Spectroscopy and Hadronic Matter	193
	Overview	193
2.1	Science case	196
2.1.1	Introduction	196
2.1.2	Charmonium spectroscopy	201
2.1.3	Hybrids and glueballs	209
2.1.3.1	Charmonium Hybrids	210
2.1.3.2	Light Hybrids	214
2.1.3.3	Glueballs	214
2.1.4	Interactions of hidden and open charm particles with nucleons and nuclei	216
2.1.5	Strange Baryons in Nuclear Fields	222
2.1.6	Further Possibilities	225
2.1.6.1	CP violation in the charmed meson and hyperon decay	226
2.1.6.2	D meson spectroscopy	228
2.1.6.3	Inverted deeply virtual and wide angle Compton scattering	229
2.1.6.4	Low energy \bar{p} -physics	230
2.1.7	Antiproton production and a general purpose detector for HESR.....	230
2.1.8	Comparison with other projects.....	233
2.1.9	Conclusions	234
2.2	Instrumentation and Detectors.....	235
2.2.1	Detector requirements	235
2.2.2	Overview of the detector concept.....	238
2.2.3	Detector components.....	240
2.2.3.1	Target spectrometer (TS).....	240
2.2.3.2	Forward spectrometer (FS).....	249
2.2.4	Trigger and data handling.....	249
2.2.5	Simulation results.....	250
	Acknowledgment	256
	References.....	258

■ 3	Nucleus-Nucleus Collisions – Compressed Baryonic Matter	265
	Overview.....	265
3.1	The scientific case	269
3.1.1	Introduction	269
3.1.2	Matter under extreme conditions: what do we know ?	274
3.1.3	Probing the fireball: experimental situation	276
3.1.3.1	Strange particles	278
3.1.3.2	Penetrating probes: lepton pairs from vector mesons	281
3.1.3.3	The charm of hot and dense matter	283
3.1.3.4	The collective flow of nucleons	286
3.1.4	Future experiments at high baryon densities.....	288
3.1.4.1	The goal	288
3.1.4.2	Experimental conditions	291
3.1.4.3	Looking into the fireball.....	293
3.1.4.4	Strangeness and charm production at threshold beam energies.....	294
3.1.4.5	Charm and more: the demand for completeness	297
3.1.4.6	Towards maximum baryon densities	299
3.1.4.7	Speculative aspects	300
3.1.5	A second generation fixed target experiment	300
3.1.5.1	Particle multiplicities and count rates.....	301
3.1.5.2	Layout of the experiment	303
3.2	Instrumentation and detectors.....	305
3.2.1	Experimental concept of a dilepton and hadron spectrometer.....	305
3.2.2	The detector components.....	307
3.2.2.1	The Superconducting Dipole Magnet.....	307
3.2.2.2	The Silicon Tracking System	309
3.2.2.3	The Transition Radiation Detector	314
3.2.2.4	The Ring Imaging Cherenkov Detector	320
3.2.2.5	The TOF Stop Detector	323
3.2.2.6	Data Acquisition and Trigger.....	329
3.2.3	Performance simulations.....	333
3.2.3.1	GEANT simulations	333
3.2.3.2	Momentum Resolution	336
3.2.3.3	Combinatorial background in charmonium experiments	336
	Acknowledgment.....	339
	References	341

■ 4	Ion and Laser Induced Plasmas – High Energy Density in Matter	347
	Overview	347
4.1	Science Case	349
4.1.1	Introduction	349
4.1.2	Matter under Extreme Conditions	354
4.1.2.1	Interaction Processes of Ions with Plasma.....	354
4.1.2.2	Hydrodynamic Response of Beam Driven Plasmas	355
4.1.2.3	Phase Transitions	356
4.1.3	Equation of State Physics	362
4.1.3.1	Equation of state studies with heavy ion beams.....	362
4.1.3.2	Two-sided Irradiation of Cylindrical Targets.....	367
4.1.3.3	Magnetized implosions driven by intense ion beams and radiation physics.....	372
4.1.4	Intense ion and laser beams – synergetics with the PHELIX laser.....	376
4.1.4.1	PHELIX as a unique diagnostic tool	376
4.1.4.2	The combined capabilities of PHELIX and the SIS-100	381
4.1.5	Spectroscopy experiments with intense ion and laser beams to investigate dense plasma properties	384
4.1.5.1	Introduction	384
4.1.5.2	Projectile spectroscopy with highest ion beam intensities.....	385
4.1.5.3	X-ray beams from PHELIX probing warm matter created by SIS-100	387
4.1.5.4	Self-consistent treatment of beam ions and target particles.....	388
4.1.5.5	Benchmark experiments for spectroscopic research at strongly coupled plasmas.....	389
4.2	Layout of the high energy density experiments	391
4.2.1	General Considerations	391
4.2.2	Final focusing of high energy heavy ion beams	392
4.2.2.1	Plasma lens focusing.....	392
4.2.2.2	Final Focusing System using Superconducting Quadrupoles	394
4.2.3	Diagnostics for heavy ion beam interaction with solid targets.....	398
4.2.3.1	Schlieren-Diagnostics	398
4.2.3.2	Conductivity measurements.....	399
4.2.3.3	Time resolved energy loss spectrometry and stopping power measurements.....	401
4.2.4	Layout of the experimental area	405
4.2.4.1	The diagnostic and control devices	407
	Acknowledgment	408
	References.....	409

■ 5	From Fundamentals to Applications – Quantum Electrodynamics, Strong Fields, Ion-Matter Interactions.....	417
	Overview.....	417
5.1	Science Case.....	421
5.1.1	Introduction.....	421
5.1.2	Atomic Physics Research.....	424
5.1.2.1	Relativistic Collision Dynamics in Strong Electromagnetic Fields.....	424
5.1.2.2	Test of Quantum Electrodynamics in Strong Fields.....	429
5.1.2.3	Atomic Physics Techniques Applied to Nuclear Physics.....	435
5.1.2.4	Atomic Physics Techniques Applied to Fundamental Tests Beyond QED.....	441
5.1.2.5	Ions and Electrons in Ultra-High Intensity, Femtosecond Laser Fields.....	449
5.1.3	Interaction of Relativistic Heavy Ion Beams for Materials Research.....	451
5.1.4	Application of Relativistic Ions in Radiobiology and Space Research.....	456
5.2	Instrumentation and Detectors.....	458
5.2.1	Experiments at SIS200.....	458
5.2.2	Experiments at NESR.....	462
5.2.3	Trap Experiments with Highly-Charged Ions, Antiprotons, and Radioactive Atoms.....	468
5.2.4	Experiments at HESR.....	471
	Acknowledgment.....	474
	Collaborating Institutes and Contact Persons.....	474
	References.....	476

Section 3:

■ The Facility	483
Overview	483
1 Introduction	489
1.1 Layout of the New Accelerator Facilities.....	489
1.2 The Existing Accelerator Facility	493
2 Generation of Beams for the Different Research Fields.....	500
2.1 Radioactive Ion Beams (RIBs)	500
2.2 Antiproton Beams	503
2.3 Beams for Plasma Physics	507
2.4 Beams for High Energy Nuclear Physics.....	509
2.5 Parallel Operation.....	510
3 The Accelerator Complex.....	512
3.1 The UNILAC	512
3.1.1 Status of high current operation	512
3.1.2 Upgrade program.....	514
3.2 The Proton LINAC	515
3.3 SIS18 Operation and Upgrade Program.....	518
3.3.1 SIS18 Status for Booster Operation in the New Accelerator Facility	518
3.3.2 Fast Ramping Mode.....	521
3.3.3 Bunch Compression System	521
3.3.4 Upgrade Program for the Ultrahigh-Vacuum System	523
3.3.5 Beam Manipulations in SIS18 Before Extraction.....	526
3.4 SIS100/200.....	528
3.4.1 Conceptual Design	528
3.4.2 Layout and Magnet Lattice Design of the Two Stage Synchrotron SIS100/SIS200	532
3.4.3 Accumulation of SIS18 Pulses in SIS100.....	534
3.4.4 Acceleration and Bunch-Compression.....	535
3.4.5 Injection and Extraction Scheme.....	537
3.4.6 High-Current Modeling and Simulation	538
3.4.7 Beam Life Time Due to Electron Stripping.....	540
3.4.8 Technical Considerations on the Vacuum System	542
3.4.9 Magnets.....	543
3.4.10 The Cryogenic System	548
3.4.11 Power Converters for the Main Dipole Magnet Strings in the Synchrotrons SIS100/200	555
3.4.12 Technical Layout of the Rf Accelerating Systems for SIS100 and SIS200	557
3.4.13 Rf-System for Bunch Compression.....	560

3.4.14	Injection and Extraction Channels	561
3.5	Antiproton Target and Separator.....	564
3.6	Collector Ring CR	568
3.6.1	Design Characteristics	568
3.6.2	Conceptual Design of Fast Stochastic Cooling.....	578
3.7	New Experimental Storage Ring NESR.....	582
3.7.1	Basic Design Considerations.....	582
3.7.2	Operation with Radioactive Beams.....	585
3.7.3	Accumulation of Antiprotons	586
3.7.4	Atomic Physics Experiments.....	587
3.7.5	Electron Cooling	588
3.7.6	Accelerator Components.....	589
3.8	High Energy Storage Ring HESR	592
3.8.1	Design Characteristics	592
3.8.2	Lattice Design.....	594
3.8.3	Magnets	595
3.8.4	Beam Injection and Accumulation	597
3.8.5	Other HESR Components	598
3.8.6	Beam Cooling.....	599
3.8.7	Discussion of Equilibrium Beam Parameters in the HESR.....	600
3.9	The Beam Transport System.....	603
3.9.1	General Properties	603
3.9.2	Specific Beam Parameters at the Experiments.....	605
3.9.3	Beam Dump and Safety Aspects	606
3.10	Beam Diagnostics and Instrumentation	608
3.10.1	Synchrotron and Storage Rings.....	608
3.10.2	Transfer Lines	610
3.11	The Control System for New Accelerator Facility	612
4	R & D-Program for the New Facility.....	616
4.1	Ion Sources.....	616
4.2	UNILAC	617
4.3	Proton Linac.....	618
4.4	SIS18.....	618
4.5	SIS100/200	619
4.6	Antiproton Production Target and Separator	620
4.7	NESR.....	621
4.8	HESR.....	622
4.9	Cryosystems	622
4.10	Superferric Magnets for Super-FRS, CR, NESR, and Beam Transfer Lines.....	623
4.11	Research and Development for Stochastic Cooling.....	623

4.12	Lattice Studies for CR, NESR, and HESR	625
4.13	High Current Models and Computer Simulation	626
4.14	Injection and Extraction Components	626
4.15	Beam Diagnostics	627
4.16	Funds and Personnel for R&D	627
5	Beam Parameters	629
5.1	Radioactive Ion Beams	629
5.2	Antiproton Physics	632
5.3	Plasma Physics	636
5.4	High Energy Nuclear Physics	638
5.5	Atomic Physics	641
	Collaboration Partners and Contact Persons.....	643
	Acknowledgment.....	643
	References	644

Section 4:

■	Civil Construction: Buildings and Supply Systems	649
1	Location of the new facility.....	649
2	Buildings.....	652
2.1	Underground Structures.....	652
2.2	Above-ground Structures.....	654
3	Supply Installations.....	657
3.1	Electric Power Supply.....	657
3.2	Cooling facilities.....	658
3.3	Air-conditioning and ventilation technologies	660
3.4	Crane facilities.....	662
4	Survey and Alignment of the Accelerator Components	662
4.1	Introduction	662
4.2	Alignment of Buildings.....	662
4.3	Basic measurements	663
4.4	Component fiducialization.....	663
4.5	Superconducting magnets	663
4.6	Pre-Alignment.....	664
4.7	Reference network	664
4.8	Final alignment procedure	665

Section 5:

■	Safety Aspects for the Design and Operation of New Accelerator Facilities	667
1	Introduction.....	667
2	Ionizing radiation.....	668
2.1	Doses in access areas	669
2.2	Activation.....	670
2.3	Storage and Handling of Activated Parts	673
2.4	Accessibility of the accelerators and experiments	674
2.5	Survey of the radiation level	674
3	Industrial Safety.....	675
	Acknowledgment	677
	References	677

Section 6:

- **Costs and Planning and Organizational Structure..... 679**
 - 1 Cost estimates 679
 - 2 Planning 687
 - 3 Organizational Structure 689

- Appendix 693**
