# "BEKASOVO"

February 19th - February 26th

ITEP Winter School of Physics has a long tradition. The School usually attracts many participants from leading research centers and universities of Russia and the world and eminent lecturers from all over the international scientific community. This year it will be held within and together with Second Joint Helmholtz-Rosatom School, which will host the young generation of scientists working in experiments at FAIR. Leading scientists will give lectures that focus on various branches of research, nuclear physics of high energy, density in matter and atomic physics.
